American Lithium Corp.

Management Discussion and Analysis

For the year ended February 28, 2021

(Expressed in Canadian Dollars)

Dated: June 24, 2021

Introduction

American Lithium Corp. (the "Company" or "American Lithium") was incorporated in British Columbia under the *Business Corporations Act* (British Columbia) and is engaged in the acquisition, exploration and development of resource properties. The Company's common shares are listed for trading on Tier 2 of the TSX Venture Exchange (the "Exchange") under the symbol "LI", the Frankfurt Stock Exchange under the symbol "5LA", and the OTCQB under the symbol "LIACF".

This management's discussion and analysis ("MD&A") reports on the operating results and financial condition of the Company for the year ended February 28, 2021 and is prepared as of June 24, 2021. The MD&A should be read in conjunction with the Company's audited annual consolidated financial statements for the years ended February 28, 2021 and February 29, 2020, and the notes thereto which were prepared in accordance with International Financial Reporting Standards ("IFRS").

All dollar amounts referred to in this MD&A are expressed in Canadian dollars except where indicated otherwise.

Cautionary Note Regarding Forward-Looking Information

This document may contain "forward-looking information" and “forward-looking statements” within the meaning of applicable securities legislation ("forward-looking statements"). All statements, other than statements of historical fact, are forward-looking statements.

Forward-looking statements relate to future events or future performance and reflect management's expectations or beliefs regarding future events and include, but are not limited to, statements regarding the business, operations, outlook and financial performance and condition of the Company; potential benefits from the acquisition of Plateau Energy Metals Inc. ("Plateau") and its subsidiaries; plans, objectives and advancement of the TLC Property, the Falchani Project and Macusani Project (each as defined below, and collectively, the “Projects”); exploration drilling plans, in-fill and expansion drilling plans and other work plans, exploration programs and development plans to be conducted; results of exploration, development and operations; expansion of resources and testing of new deposits; environmental and social community and other permitting; timing, type and amount of capital and operating and exploration expenditures, as well as future production costs; estimation of mineral resources and mineral reserves; realization of mineral reserves; preliminary economic assessments, including the assumptions and parameters upon which they are based, and the timing and amount of future estimated production; development and advancement of the Projects; success of mining operations; treatment under regulatory regimes; ability to realize value from the Company’s assets; adequacy of the Company’s financial resources; environmental matters, including reclamation expenses; insurance coverage; title disputes or claims, including the status of the "Precautionary Measures" filed by the Company's subsidiary Macusani Yellowcake S.A.C. (“Macusani), the outcome of the administrative process, the judicial process, and any and all future remedies pursued by the Company and its subsidiary Macusani to resolve the title for 32 of its concessions; the anticipated New Uranium Regulations affecting Peru; and limitations on insurance coverage any other statements regarding the business plans, expectations and objectives of the Company; and any other information contained herein that is not a statement of historical fact. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved" or the negative of these terms or comparable terminology. In this document, certain forward-looking statements are identified by words including "may", "future", "expected", "intends" and "estimates".

Forward-looking statements are based on management’s reasonable estimates, expectations, analyses and opinions at the date the information is provided, and is based on a number of assumptions and subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking statements. Assumptions upon which such forward-looking statements are based include, without limitation: that no significant event will occur outside the ordinary course of business of the Company; the Company’s ability to achieve its stated goals and objectives, including

the anticipated benefits of the acquisition of Plateau and its subsidiaries; legislative and regulatory environment; impact of increasing competition; current technological trends; price of lithium, uranium and other metals; costs of development and advancement; anticipated results of exploration and development activities; the ability to operate in a safe and effective manner; and the ability to obtain financing on reasonable terms. Readers are cautioned that the foregoing list is not exhaustive. Further, the aforementioned assumptions may be affected by the negative disruptive effect of the novel coronavirus ("COVID-19") pandemic, which has resulted in a widespread health crisis that has already affected the economies and financial markets of many countries around the world. The international response to the spread of COVID-19 has led to significant restrictions on travel; temporary business closures; quarantines; global stock market and financial market volatility; a general reduction in consumer activity; operating, supply chain and project development delays and disruptions; and declining trade and market sentiment, all of which have and could further affect commodity prices, interest rates, credit ratings and credit risk. The continuing and additional business interruptions, expenses and delays relating to COVID-19, could have a material adverse impact on the Company's plans, operations, financial condition and the market for its securities; however, as at the date of this MD&A, such cannot be reasonably estimated. Although the Company believes that the current opinions and expectations reflected in such forward-looking statements are reasonable based on information available at the time, undue reliance should not be placed on forward-looking statements since the Company can provide no assurance that such opinions and expectations will prove to be correct.

All forward-looking statements are inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including risks, uncertainties and assumptions related to: the Company's ability to achieve its stated goals, including the anticipated benefits of the acquisition of Plateau and its subsidiaries or that integration of the companies will not occur as planned or such integration will be more difficult, time consuming or costly than expected; the estimated valuation of the Company being accurate; the estimated costs associated with the advancement of the Projects; legislative changes that impact operations of the Company; risks and uncertainties relating to the COVID-19 pandemic and the extent and manner to which measures taken by governments and their agencies, the Company or others to attempt to reduce the spread of COVID-19 could affect the Company, which could have a material adverse impact on many aspects of the Company's businesses including but not limited to: the ability to access mineral properties for indeterminate amounts of time, the health of the employees or consultants resulting in delays or diminished capacity, social or political instability in Peru which in turn could impact the Company's ability to maintain the continuity of its business operating requirements, may result in the reduced availability or failures of various local administration and critical infrastructure, reduced demand for the Company's potential products, availability of materials, global travel restrictions, and the availability of insurance and the associated costs; the anticipated New Uranium Regulations affecting Peru; risks related to the certainty of title to the properties of the Company, including the status of the "Precautionary Measures" filed by the Company's subsidiary Macusani, the outcome of the administrative process, the judicial process, and any and all future remedies pursued by the Company and its subsidiary Macusani to resolve the title for 32 of its concessions; risks regarding the ongoing Ontario Securities Commission regulatory proceedings; the ongoing ability to work cooperatively with stakeholders, including, but not limited to, local communities and all levels of government; the potential for delays in exploration or development activities and other effects due to global pandemics, such as the COVID-19 pandemic; the interpretation of drill results, the geology, grade and continuity of mineral deposits; variations in ore reserves, grade and recover rates; changes in project parameters as plans continue to be refined; the possibility that any future exploration, development or mining results will not be consistent with expectations; risks that permits or approvals will not be obtained as planned or delays in obtaining permits or approvals; mining and development risks, including risks related to accidents, equipment breakdowns, labour disputes (including work stoppages, strikes and loss of personnel) or other unanticipated difficulties with or interruptions in exploration and development; other risks of the mining industry; risks related to commodity price and foreign exchange rate fluctuations; risks related to foreign operations; the cyclical nature of the industry in which the Company operate; risks related to failure to obtain adequate financing on a timely basis and on acceptable terms or delays in obtaining governmental approvals; risks related to environmental regulation and liability; political and regulatory risks associated with mining and exploration; risks related to the uncertain global economic environment and the effects upon the global market generally, and due to the COVID-19 pandemic measures taken to reduce the spread of COVID-19, any of which could continue to negatively affect global financial markets, including the trading price of the Company's shares and could negatively affect the Company's ability to raise capital and may also result in additional and

unknown risks or liabilities to the Company. Other risks and uncertainties related to prospects, properties and business strategy of the Company are identified in the “Risk Factors” section of this MD&A, as well as those factors detailed from time to time in the Company's condensed interim and annual consolidated financial statements and other recent securities filings available at www.sedar.com.

Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The Company does not undertake to update any forward-looking statements that are contained herein, except in accordance with applicable securities laws.

Cautionary Note Regarding Macusani Concessions

Thirty-two of the 151 concessions held by American Lithium’s subsidiary Macusani, are currently subject to Administrative and Judicial processes (together, the “Processes”) in Peru to overturn resolutions issued by INGEMMET and the Mining Council of MINEM in February 2019 and July 2019, respectively, which declared Macusani’s title to the 32 of the concessions invalid due to late receipt of the annual validity payment. Macusani successfully applied for injunctive relief on 32 concessions in a Court in Lima, Peru, and the grant of the Precautionary Measures (Medida Cautelar) has restored the title, rights and validity of those 32 concessions to Macusani until a final decision is obtained in at the last stage of the judicial process. If American Lithium’s subsidiary Macusani does not obtain a successful resolution of Processes, Macusani’s title to the concessions could be revoked.

Description of Business

American Lithium is an exploration stage company engaged in the acquisition, exploration and development of resource properties.

In June 2020, the Company appointed Simon Clarke as a director of the Company.

In June 2020, 500,000 common shares were issued to the TLC Royalty Holder, defined below in "Current Properties", in connection with the TLC Property purchase/royalty agreement.

In July 2020, the Company entered into a royalty buyback agreement with TLC Royalty Holder under which the Company bought back one-and-one-half percent (1.5%) of the existing gross overriding royalty pertaining to the TLC Property in consideration for $200,880 (US$150,000) and 843,750 common shares at a fair value of $1,805,625 to the TLC Royalty Holder.

In July 2020, the Company closed a share purchase agreement with the shareholder of Esoteric Consulting Ltd. ("Esoteric") whereby the Company purchased 100% of the outstanding shares of Esoteric. Esoteric owned 50% of the issued outstanding shares 4286128 Nevada Corp. ("4286128 Nevada"), which holds the title to a series of lode mining claims totalling approximately 2,000 acres located in Nye County, Nevada, contiguous to and north and northwest of the TLC Property. On the same day, the Company, through Esoteric, acquired the remaining 50% of the issued and outstanding shares of 4286128 Nevada. Pursuant to these share purchase agreements, the Company issued 4,000,000 common shares of the Company at a fair value of $7,320,000.

In September 2020, the Company entered into a real estate property purchase agreement to acquire over 300 acres of privately held lands and the accompanying 1,176 acre-feet of water rights. ("TLC Water Rights Agreement"). The transfer of the property interest and the water rights was finalized for total consideration of US$1.3 million, of which the Company paid US$265,000 ($349,488) on closing and issued a promissory note for US$1,035,000 to the vendors.

In September 2020, the Company granted 4,800,000 stock options to certain officers, directors, and consultants of the Company at an exercise price of $1.28. These options were granted for a period of five years, vested as follows: 1/3 on the date of grant, 1/3 on the date that is six months from the date of grant and 1/3 on the first anniversary of the grant date.

During the year ended February 28, 2021, the Company issued 34,655,051 common shares in connection with the exercise of 34,655,051 warrants with a weighted average exercise price of $0.37 for total proceeds of $12,802,296. In addition, the Company also issued 4,570,000 common shares in connection with the exercise of 4,570,000 stock options with an exercise price of $0.37 for total proceeds of $1,712,600.

Subsequent to February 28, 2021, the Company issued 1,772,400 common shares in connection with the exercise of 1,772,400 warrants with a weighted average exercise price of $0.16 for total proceeds of $279,050. In addition, the Company also issued 150,333 common shares in connection with the exercise of 150,333 stock options with a weighted average exercise price of $0.94 for total proceeds of $140,926.

In April 2021, the Company closed a non-brokered private placement financing of 7,518,750 units at a price of $2.00 per unit for gross proceeds of $15,037,500. Each unit consists of one common share of the Company and one-half share purchase warrant. Each warrant shall entitle the holder to purchase an additional common share of the Company at a price of $3.00 for a period of three years. The Company paid aggregate cash finders' fees totaling $590,250 and issued 295,125 non-transferrable warrants to certain finders in relation to the financing.

In May 2021, the Company completed the acquisition of all the issued and outstanding common shares of Plateau. The arrangement resulted in Plateau becoming a wholly-owned subsidiary of the Company (the "Transaction"). Plateau, a Canadian exploration and development company, is focused on exploring and developing the Falchani Lithium Project and Macusani Uranium Project in southeastern Peru, both of which are situated near significant infrastructure.

Under the terms of the arrangement, each Plateau share is entitled to receive 0.29 of a common share of the Company (each whole share a “common share”) and 0.145 of a common share purchase warrant (each whole warrant an "Exchange Warrant") of the Company. Each whole Exchange Warrant will entitle the holder to acquire one common share of the Company at a price of $3.00 until May 11, 2024.

Each existing Plateau share purchase warrant will, upon the exercise thereof in accordance with its terms, entitle the holder to acquire 0.29 of a common share and 0.145 of an Exchange Warrant. Existing Plateau stock options will be exchanged for an option to acquire from the Company the number of common shares equal to the product of: (A) the number of Plateau shares subject to such Plateau stock option immediately prior to the arrangement, multiplied by (B) 0.29 of a common share for each Plateau share. Each restricted share unit and deferred share unit of Plateau was vested immediately prior to completion of the Transaction and was exchanged for one Plateau share, and the holders thereof participated in the Transaction as Plateau shareholders. Pursuant to the arrangement, American Lithium acquired 127,213,511 Plateau shares, representing 100% of the outstanding Plateau Shares.

In connection with the arrangement, Plateau paid $600,625 in cash and issued 2,666,666 Plateau shares as finders' fees. In addition, the Company paid $200,000 in cash and issued 867,882 common shares as finders' fees.

In May 2021, the Company entered into an agreement with an arm's-length party which controls all rights to the claims to acquire a 100% interest in a series of mining claims contiguous and to the west of the existing TLC project. The claims are not subject to any royalties or encumbrances. Pursuant to the agreement, the Company issued 4,000,000 common shares to acquire these mining claims. No finders' fees or commissions are payable in connection with the acquisition and the acquisition remains subject to the approval of the TSX Venture Exchange.

In May 2021, two Plateau directors were appointed to the Company's board:

Dr. Laurence Stefan, the founder of Plateau (formerly Macusani Yellowcake Inc.) has over 30 years of experience in the mining industry (exploration, development, mining, processing and marketing), serving as managing director in Peru since 2007. Dr. Stefan previously worked at Gold Fields of South Africa and JCI Pty. Ltd., where he was involved in the beneficiation of a wide variety of solid metal/non-metal commodities. He has vast experience covering over 100 projects on six continents and led the discovery team for the Falchani Lithium Project. Dr Stefan has also been appointed as President and Chief Operating Officer of the Company.

Mr. Ted O'Connor PGeo, MSc, is a professional geoscientist with over 30 years of experience in the exploration industry and has been involved with Plateau since shortly after inception. Previously, as director of corporate development for Cameco Corporation, he was responsible for evaluating, directing and exploring for uranium deposits worldwide. He has led new project generation from early exploration through discovery on multiple uranium projects and was also part of the discovery team for the Falchani Lithium Project. Mr O'Connor also serves as a Technical Advisor to the Company.

In addition, Philip Gibbs from Plateau was appointed as CFO of the Company.

Overall Performance

The Company has been actively involved in lithium exploration since April 2016 and has been focused on the acquisition, exploration and development of Americas-based properties prospective for lithium deposits and has now expanded this focus to properties across the Americas with its acquisition in Peru. Currently, American Lithium focus its interests in the TLC Property, the Falchani Property and the Macusani Property, as the Company recognizes them as development stage properties with significant potential for continued development.

Exploration and Evaluation Properties

For the year ended February 28, 2021, the Company incurred exploration and evaluation costs of $11,154,014 (prior to write-off) as compared to $91,474 (prior to write-off) in the comparative year for 2020.

The cost of acquiring and maintaining the Company's interest in its exploration and evaluation assets are capitalized on a property-by-property basis pending determination of the technical feasibility and the commercial viability of the project. Exploration and evaluation costs are expensed as incurred. Costs directly related to the acquisition are capitalized once the legal rights to explore the exploration and evaluation assets are acquired or obtained.

Change during the year ended February 29, 2020:

	Colorado Property	Gap Lode Claim Block Property	TLC Property	Extinction Ridge Property	Total
	$	$	$	$	$
Maintenance fees	-	-	78,956	12,518	91,474
	-	-	78,956	12,518	91,474
Write-off of exploration and evaluation assets	(4,880,309)	(4,191,357)	-	-	(9,071,666)
For the year ended February 29, 2020	**(4,880,309)**	**(4,191,357)**	**78,956**	**12,518**	**(8,980,192)**

Change during the year ended February 28, 2021:

	TLC Property	Extinction Ridge Property	Total
	$	$	$
Acquisition costs	9,092,899	-	9,092,899
Royalty buyback	2,006,505	-	2,006,505
Maintenance fees	54,610	-	54,610
	11,154,014	-	11,154,014
Write-off of exploration and evaluation assets	-	(251,133)	(251,133)
For the year ended February 28, 2021	**11,154,014**	**(251,133)**	**10,902,881**

The total cumulative acquisition and deferred exploration costs for the Company's projects to February 28, 2021 are summarized as follows:

	TLC Property	Extinction Ridge Property	Total
	$	$	$
Acquisition costs	9,354,684	238,615	9,593,299
Royalty buyback	2,006,505	-	2,006,505
Maintenance fees	148,305	12,518	160,823
	11,509,494	251,133	11,760,627
Write-off of exploration and evaluation assets	-	(251,133)	(251,133)
Balance, February 28, 2021	**11,509,494**	**-**	**11,509,494**

Qualified Person and Technical Reports

The scientific and technical information contained in this MD&A relating to the TLC Project has been reviewed and approved by Bruce Kienlen, P.Geo., who is independent of the Company, and for the Falchani and Macusani projects by Ted O'Connor, a Director and Technical Advisor of American Lithium, who are Qualified Persons as defined in National Instrument 43-101.

Certain scientific and technical information with respect to the TLC Property contained in this MD&A has been taken from the technical report entitled "Technical Report for the TLC Property, Nye County, Nevada, USA" with an effective date of April 15, 2020 and prepared by Derek J. Loveday and William A. Turner of Stantec Consulting Ltd., a copy of which is available on American Lithium's SEDAR profile at www.sedar.com. Certain scientific and technical information with respect to: (a) the Falchani Project contained in this MD&A has been taken from the technical report entitled "Falchani Lithium Project NI 43-101 Technical Report – Preliminary Economic Assessment" with an effective date of February 4, 2020 and prepared by John Joseph Riordan, David Alan Thompson, Valentine Eugene Coetzee and Stewart Nupen of DRA Pacific.; and (b) the Macusani Project contained in this MD&A has been taken from the technical report entitled "Macusani Project, Macusani, Peru, NI 43-101 Report – Preliminary Economic Assessment" with an effective date of January 12, 2016 and prepared by Michael Short and Thomas Apelt of GBM Minerals Engineering Consultants Limited, David Young of The Mineral Corporation and Mark Mounde of Wardell Armstrong International Limited, copies of both of which are available on Plateau's SEDAR profile at www.sedar.com. The preliminary economic assessments included herein are preliminary in nature, and include inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary economic assessments will be realized. Additional work is required to upgrade the mineral resources to mineral reserves. In addition, the mineral resource estimates could be materially affected by environmental, geotechnical, permitting, legal, title, taxation, socio-political, marketing or other relevant factors.

Current Properties

Tonopah Claystone Claims ("TLC") Property - Nevada, USA

In August 2018, the Company finalized a purchase/royalty agreement with Nevada Alaska Mining Co., Inc. ("TLC Royalty Holder"), who has the claims and title to a series of unpatented lode mining claims located in Nye County, Nevada, USA, subject to an overriding 2.5% gross overriding royalty, of which 1.25% can be purchased within 3 years for US$1 million.

As at November 21, 2018, the Company fulfilled its commitments and acquired a 100% undivided interest in the TLC property. During the year ended February 28, 2019, the Company issued 250,000 common shares at a fair value of $130,000 and paid $131,785 (US$100,000) to TLC Royalty Holder.

In addition, the agreement stipulated that if the Company calculates a mineral resource on the TLC Property exceeding 500,000 tons of Lithium Carbonate Equivalent ("LCE") in all reserve categories, the Company will issue a bonus payment of 250,000 shares to TLC Royalty Holder. An additional 250,000 shares will be issued to TLC Royalty Holder if the calculation exceeds 1,500,000 tons of LCE on the TLC Property. During the nine months ended November 30, 2020, and following the release of a maiden NI 43-101 resource estimate on the TLC Property, the Company issued 500,000 common shares at a fair value of $320,000 due to the LCE calculation on the TLC Property.

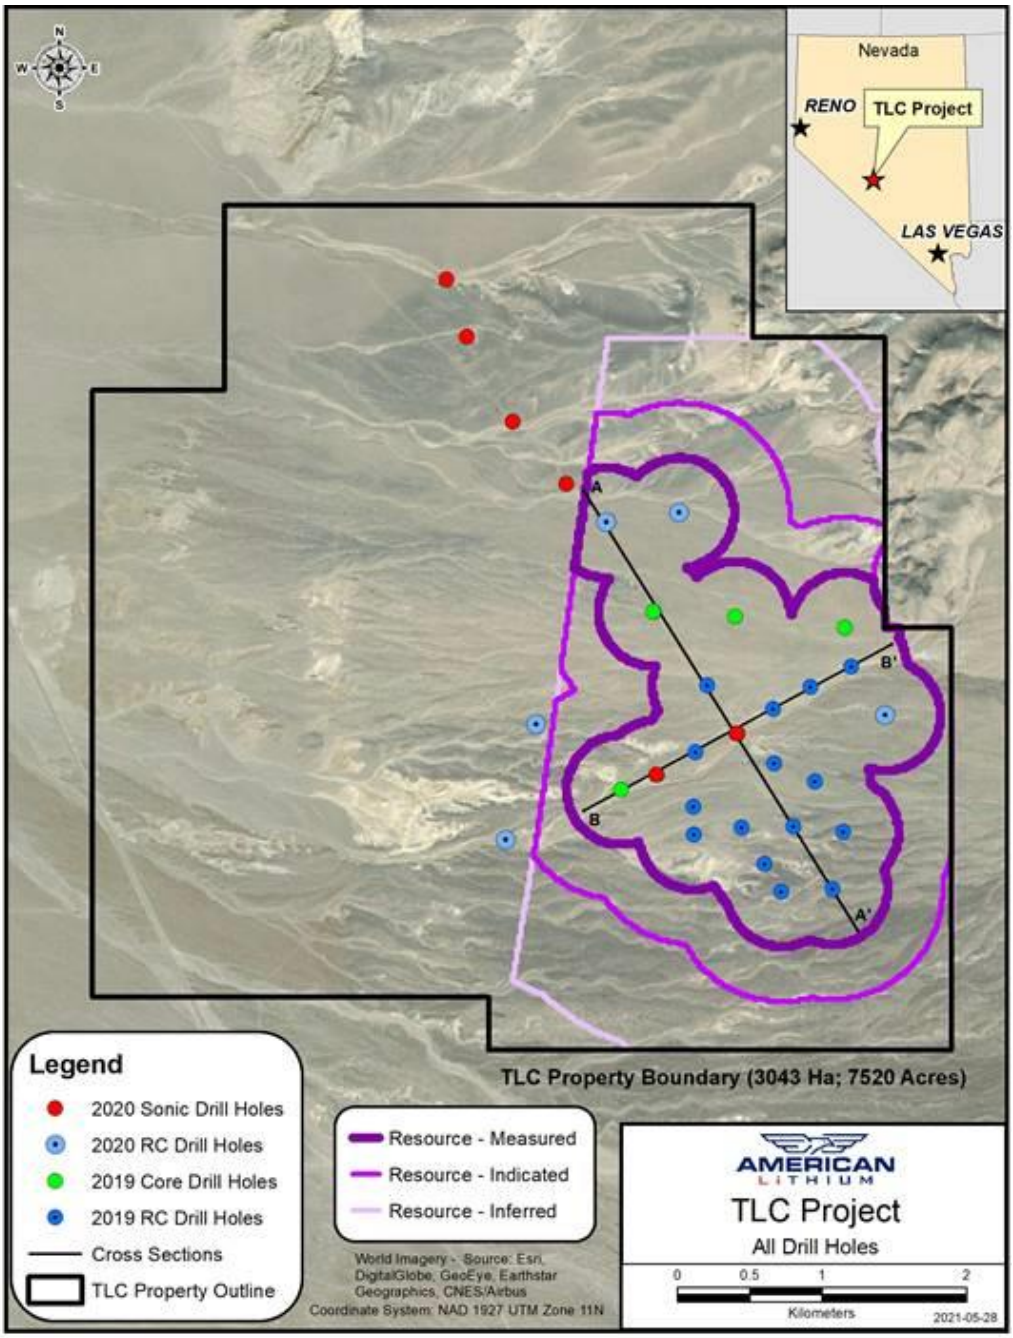
On July 9, 2020, the Company entered into a royalty buyback agreement with TLC Royalty Holder under which the Company bought back one-and-one-half percent (1.5%) of the existing gross overriding royalty pertaining to the TLC Property in consideration for $200,880 (US$150,000) and 843,750 common shares at a fair value of $1,805,625 to the TLC Royalty Holder.

On July 24, 2020, the Company closed a share purchase agreement with the shareholder of Esoteric Consulting Ltd. ("Esoteric") whereby the Company purchased 100% of the outstanding shares of Esoteric. Esoteric's only asset is comprised of its ownership of 50% of the issued outstanding shares 4286128 Nevada Corp. ("4286128 Nevada"), which holds the title to a series of lode mining claims totalling approximately 2,000 acres located in Nye County, Nevada, contiguous to and north and northwest of the TLC Property. On the same day, the Company, through Esoteric, acquired the remaining 50% of the issued and outstanding shares of 4286128 Nevada. Pursuant to these share purchase agreements, the Company issued 4,000,000 common shares of the Company at a fair value of $7,320,000, which has been accounted for as an asset acquisition.

On September 14, 2020, the Company entered into a real estate property purchase agreement to acquire over 300 acres of privately held lands and the accompanying 1,176 acre-feet of water rights. ("TLC Water Rights Agreement"). The transfer of the property interest and the water rights was finalized for total consideration of US$1.3 million, of which the Company paid US$265,000 ($349,488) on closing and issued a promissory note for US$1,035,000 to the vendors.

The water rights come from a 326-acre farm whose water rights are part of the same hydrographic basin as the TLC Project, Basin 137-a, or 'Big Smoky Valley – Tonopah Flat'. The purchase of the farm is a critical step in securing the required makeup water for the innovative patent-pending lithium recovery process for TLC's unique lithium bearing claystones. Such process will minimize water use but some makeup water will be required.

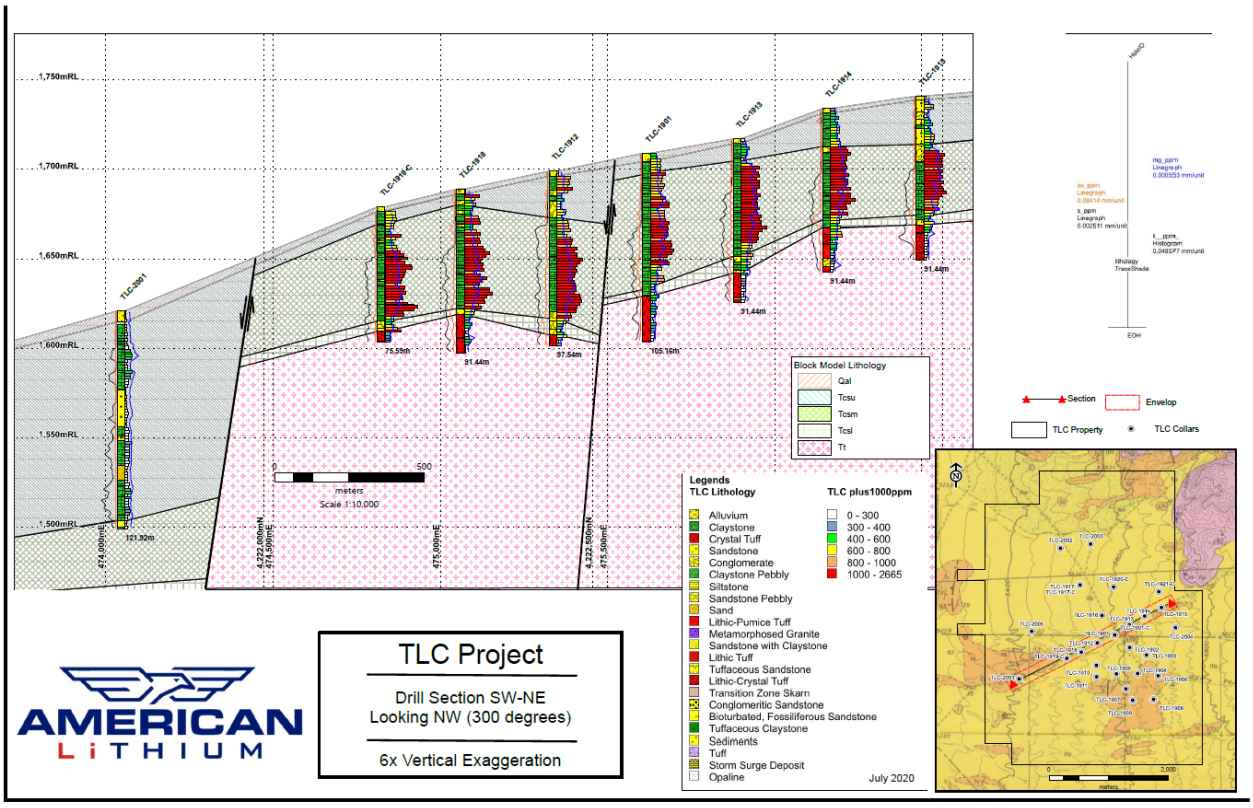
The TLC Project has been the focus of the company's exploration efforts since 2019. Lithium claystone mineralization is found consistently in near surface sampling across a 3 square kilometre area and is open to expansion to the north, south and west sides of the project. The property is composed of 251 contiguous claims which have an area of 3043 hectares or 7520 acres (see figure below).



TLC Claim map with Collar Locations

Drill Programs

The Phase I RC Drill Program was completed in late winter 2019 with a total of 18 reverse circulation drill holes and 1719 metres of drilling completed. Significant lithium enriched claystone beds have been identified over area 2.5 kilometre long and 1.5 kilometre wide. There is a consistent stratigraphic and grade correlation between adjacent drill holes (see below).



Drill holes in section SW-NE TLC-1919C to TLC-1915

A second part of the Phase I drill program was a Core Recovery Program was conducted in June 2019. Five diamond drill holes totaling 487.7 metres were completed, two of which were twin holes to RC drill holes. Assay results confirm previous drill results and expand the extent of mineralization.

Phase II RC Drill Program was completed in February 2020 consisting of five reverse circulation drill holes for 594.4 metres. Results help to define the extent of mineralization and the geological conditions within the claim block. Significant composite intersections for all the drilling campaigns are shown below.

In November 2020, the Company commenced a Phase III 6 Sonic Drill Program, drilling six holes (a seventh hole was abandoned). This program was designed to recover additional sample material from previously drilled areas within the resource. The recovered material from two holes were submitted for mineralogical and metallurgical testing. Two drill holes in the northern part of the new claims had assay analysis done on selected intervals, which indicate lithium values are lower than in the central part of the deposit. Additional drilling will be required to fully assess the new claims.

Resource Estimate

A maiden 43-101 resource estimate was prepared by Stantec Consulting Ltd., effective April 15, 2020 utilizing the Phase I and II drilling results. An estimated pit-constrained Resource (at 400 ppm cut-off) of 1.107 billion tonnes Measured and Indicated ("M+I") plus 362 million tonnes Inferred containing 5.37 million tonnes Lithium Carbonate Equivalent ("LCE") M+I and 1.76 million tonnes LCE Inferred. See table below for a summary of the TLC pit-constrained resource estimate at various cut-offs. The Company is planning additional drilling to expand the resource further.

TLC Project Lithium Resource Estimates

Cutoff	Volume	Tonnes	Li	Million Tonnes (Mt)		
Li (ppm)	(Mm^3)	(Mt)	(ppm)	Li	Li_2CO_3	$LiOH.H_2O$
Measured						
400	**400**	**680**	**932**	**0.63**	**3.35**	3.81
600	321	546	1,038	0.57	3.03	3.45
800	241	410	1,151	0.47	2.50	2.84
1000	169	287	1,256	0.36	1.92	2.18
Indicated						
400	**251**	**427**	**898**	**0.38**	**2.02**	2.30
600	190	323	1,028	0.33	1.76	2.00
800	142	241	1,138	0.27	1.44	1.63
1000	95	162	1,256	0.20	1.06	1.21
Measured plus Indicated						
400	**651**	**1,107**	**912**	**1.01**	**5.37**	6.11
600	511	869	1,036	0.90	4.79	5.45
800	383	651	1,137	0.74	3.94	4.47
1000	264	449	1,247	0.56	2.98	3.39
Inferred						
400	**213**	**362**	**912**	**0.33**	**1.76**	2.00
600	170	289	1,016	0.29	1.54	1.75
800	128	218	1,118	0.24	1.28	1.45
1000	84	143	1,228	0.18	0.96	1.09

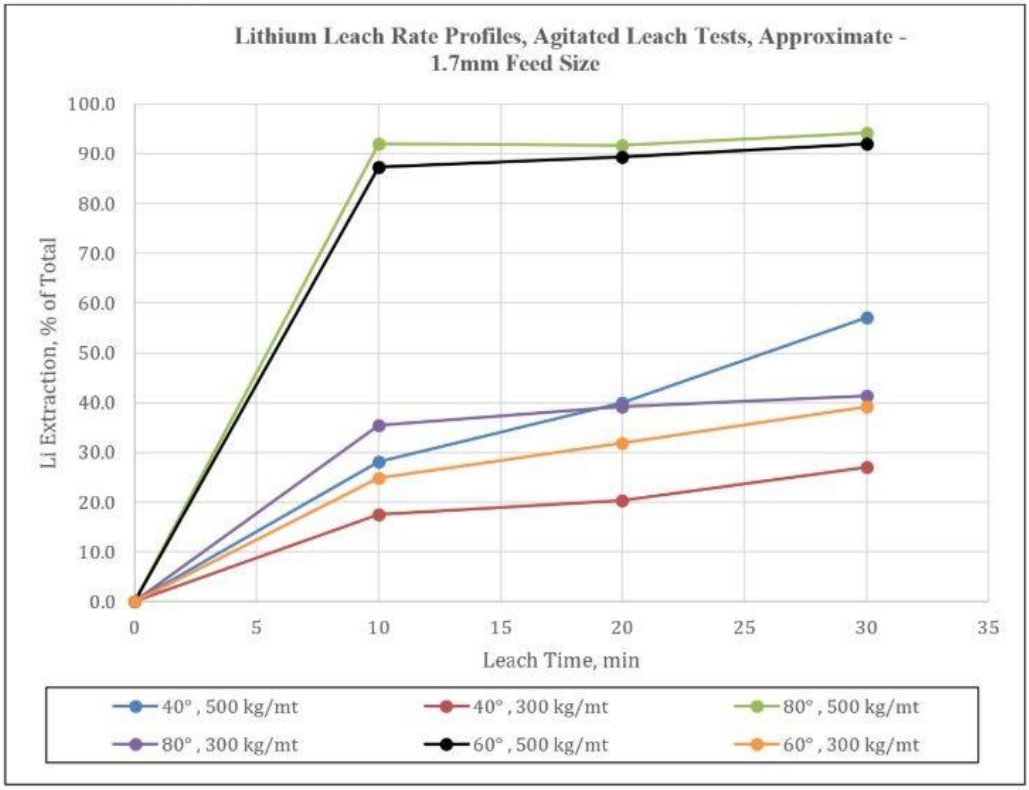
• CIM definitions are followed for classification of Mineral Resource.
• Mineral Resource surface pit extent has been estimated using a lithium carbonate price of US10,000 US$/tonne and mining cost of US$2.00 per tonne, processing costs of US$14 per tonne, a lithium recovery of 80%, fixed density of 1.70 g/cm3
• Conversions: Li2CO3:Li ratio = 5.32, LiOH.H2O:Li ratio =6.05
• Totals may not represent the sum of the parts due to rounding.
• The Mineral Resource estimate has been prepared by Derek Loveday, P. Geo. of Stantec Consulting Services Ltd. in conformity with CIM "Estimation of Mineral Resource and Mineral Reserves Best Practices" guidelines and are reported in accordance with the Canadian Securities Administrators NI 43-101. Mineral resources are not mineral reserves and do not have demonstrated economic viability. There is no certainty that any mineral resource will be converted into mineral reserve.

Mineralogical and Metallurgical Testing

Mineralogical and metallurgical tests are underway. Testing conducted by McClelland Laboratories of Sparks, Nevada, demonstrates that lithium recoveries exceeding 90% are achieved in 10 minutes with sulfuric acid leaching. Drill cuttings were subjected to several extraction methods including agitated leach, acid curing and counter-current agitated leach. In combination with the process evaluation, leach solution temperature was

investigated. In general, TLC lithium claystone is consistently highly leachable throughout the project with leach times comparing very favourably with other claystone projects.

Results from Agitated Leach Tests



Additional testing designed by SND Consulting of Tucson, Arizona, and conducted by McClelland Laboratories of Sparks, Nevada, demonstrates that using an acid agglomeration and cure process for the extraction of lithium resulted in an average 87% lithium extraction with only a brief agitation period and without high solution temperature requirements. This testing indicates the extraction process can potentially be completed without the use of any heat and with a very brief agitation time. In addition, the acid consumption was lower than required for an agitation leach. There was no statistical difference in lithium extractions between acid dose levels of 500 or 600 kg/tonne of ore, suggesting that evaluation of lower acid dose is required to define the lower limit.

A flowsheet based on acid leaching, impurity removal, and lithium carbonate precipitation has been tested at McClelland Laboratories and was successful in the production of lithium carbonate. This base-case flowsheet will be optimized further. Additionally, various improvements to the process are being considered such as mineral separation and acid regeneration. Moreover, the production of lithium hydroxide as a product is being considered as well.

The Company has continued to build on these results by utilizing researchers at Lawrence Berkeley National Laboratory (LBNL) and then corroborating and expanding the LBNL findings utilizing McClelland Laboratories in Sparks, Nevada. Utilizing a centrifuge, technicians were able to concentrate lithium to grades as high as 2207 ppm and then extract up to 96% of the lithium in the upgraded fraction while utilizing 45% less sulfuric acid per unit of lithium extracted compared to previous testing. The beneficiated fraction contained 78.5% of the lithium in 51% of the mass; providing overall lithium extractions of 75% and a greatly improved economic outlook due to the reduced acid consumption and higher lithium grade in the leachate solution.

Further verification of this process was completed by SGS Laboratories of Lakefield, Ontario, wherein SGS confirmed similar upgrading, with statistically similar results, using hydro cyclone technology. In comparison to the laboratory scale centrifuge testing at McClelland labs, the use of hydro cyclone separators at SGS illustrates the potential to implement this process on an industrial scale.

The Company continues to advance its process engineering as it looks to optimize an appropriate flowsheet for the TLC Claystone mineralization focused on maximizing economic benefits while minimizing environmental impacts.

Other Information

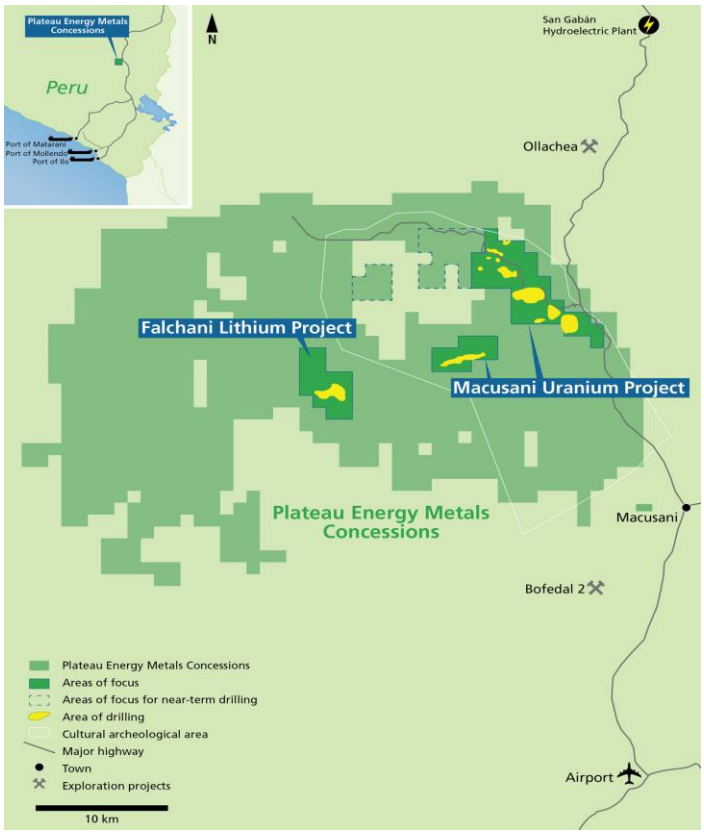
In August 2020, the Company announced the results from its Draft Baseline Biological Survey Report which examined the project area in detail to document all species present. The report shows that "No species or habitat protected under the ESA (Endangered Species Act) are present within the project area." This is a positive development for American Lithium as it suggests the development of TLC can continue and will not be threatening to vulnerable species. Further, it allows for continuation of study and the completion of the Plan of Operation (Environmental Assessment). American Lithium has delivered the Notice to Proceed to EM Strategies to begin the Cultural Survey, which is the next major step in the permitting process.

The Company submitted its Plan of Operations to the Bureau of Land Management (BLM) in January 2021 which also included the above Baseline Biological Survey as well as a Baseline Cultural Survey. The Company announced on June 17, 2021, that the BLM has accepted the Plan of Operations as complete and, approval is anticipated within 3 months. The Plan of Operations increases the surface disturbance allowance to 168 acres in two phases, 84.5 acres in Phase 1, and 78.5 acres in Phase 2, and includes all necessary descriptions of environmental and reclamation planning for the next phase of operations, which includes up to 95 new drill sites to further characterize the TLC resource, excavation of large test pits to provide bulk sampling for metallurgical testing, a 5-acre laydown area intended for the future pilot plant and biological and cultural surveys that can be used for further permitting.

With a large lithium resource, strategically located in Nevada the Company believes that it is well positioned to benefit from growing demand for sustainable, domestically sourced supplies of lithium.

Falchani Lithium Project ("Falchani" or "Falchani Lithium Project") and Macusani Uranium Project ("Macusani" or the "Macusani Uranium Project") – Puno, Peru

Following the Transaction with Plateau, through its Peruvian operating company subsidiary, Macusani Yellowcake S.A.C., the Company holds title to, or has court injunctions preserving title on, over 930 km^2 of mineral concessions in the Province of Carabaya, Department of Puno in southeastern Peru. The current project land position was the result of several consolidation transactions between 2007 and 2014 (see Map, below):



Cautionary Note Regarding Concessions

Thirty-two of the 151 concessions held by American Lithium's subsidiary Macusani, are currently subject to the Processes in Peru to overturn resolutions issued by INGEMMET and the Mining Council of MINEM in February 2019 and July 2019, respectively, which declared Macusani's title to the 32 of the concessions invalid due to late receipt of the annual validity payment. Macusani successfully applied for injunctive relief on 32 concessions in a Court in Lima, Peru, and the grant of the Precautionary Measures (Medida Cautelar) has restored the title, rights and validity of those 32 concessions to Macusani until a final decision is obtained in at the last stage of the judicial process. If American Lithium's subsidiary Macusani does not obtain a successful resolution of Processes, Macusani's title to the concessions could be revoked.

Falchani Lithium Project Highlights

Following the initial discovery in November 2017, accelerated exploration efforts led to the maiden mineral resource estimates being announced on July 24, 2018, followed by an updated mineral resource estimate on March 4, 2019, increasing the total lithium resources by more than 90%. The Falchani Lithium Project resource is comprised of three zones, namely the upper breccia unit ("UBX"), lithium-rich tuff unit ("LRT") and lower breccia unit ("LBX"), in order of stratigraphy.

The results of an independent Preliminary Economic Assessment ("PEA"), prepared by DRA Global ("DRA"), were announced on February 4, 2020, demonstrating that the Falchani Lithium Project has the potential to become a large, long life producer of low cost, high quality, low impurity battery grade Li2CO3. Unless otherwise stated, all dollar figures for the PEA are in United States dollars and the economic highlights represent the Company's 100% interest in the Falchani Lithium Project. The Falchani Lithium Project PEA presents a "Base Case" scenario which is inclusive of both the Falchani and Ocacasa 4 concessions. The "Alternative Case" scenario presented represents only the Falchani concession to demonstrate the economic value as if the Falchani concession were a standalone or phase 1 project in light of the current dispute with regards to the ownership of the Ocacasa 4 concession. Please refer to the Cautionary Note Regarding Concessions section in this MD&A.

Preliminary Economic Assessment Key Highlights

Description	**Units**	**Base Case**	**Alternative Case**
LCE Price	tonne	12,000	12,000
Life of Mine	years	33	26
Processing Rate P1 / P2 / P3[1]	Mtpa	1.5 / 3.0 / 6.0	1.5 / 3.0 / NA
Average Throughput (P1)	tpa	1,437,500	1,437,500
Average Throughput (LOM)	tpa	4,407,687	2,421,780
Li_2CO_3 Produced (average LOM)[1]	tpa	63,034	33,842
P1 Li_2CO_3 Production (steady state)	tpa	22,678	22,731
P2 Li_2CO_3 Production (steady state)	tpa	44,227	41,252
P3 Li_2CO_3 Production (steady state)	tpa	85,230	n/a
LCE Produced (total LOM)[1]	tonnes	2,080,113	879,895
Unit Operating Cost (OPEX) P1[2]	$/LCE tonne	4,438	4,348
Unit Operating Cost (OPEX) LOM[2]	$/LCE tonne	3,958	4,333
Gross Revenue	$ B	24,961	10,558
Capital Cost (CAPEX)[3] P1	$ M	587	587
Capital Cost (CAPEX)[3] LOM	$ M	1,970	1,082
Sustaining Capital Costs (undiscounted)	$ M	119.6	66.4
Project Economics - $12,000/t Li_2CO_3			
Pre-tax:			
Net Present Value (NPV) (8%)	U$ M	2,712	1,514
Internal Rate of Return (IRR)	%	24.2	23.5
Payback Period (undiscounted)	years	4.3	4.2
Average Annual Cash Flow (LOM)	$ M	444	215
Cumulative Cash Flow (undiscounted)	$ M	14,638	5,597
After-tax:			
Net Present Value (NPV) (8%) After-Tax	$ M	1,554	844
Internal Rate of Return (IRR) After-Tax	%	19.7	18.8
Payback Period (undiscounted)	years	4.7	4.6
Average Annual Cash Flow (LOM/P2 or P3 steady state)	$ M	272 / 430 (P3)	131 / 198 (P2)
Cumulative Cash Flow (undiscounted)	$ M	8,977	3,418

Notes:

1. Production: base case is 3 phases, 1.5Mtpa, 3Mtpa and 6Mtpa; alternative case is 2 phases 1.5Mtpa and 3Mtpa.
2. Includes all operating expenditures, the estimate is expected to fall within an accuracy level of ±35%.

3. Includes 11% contingency on process plant capital costs, 15% contingency is included in the tailings and infrastructure costs, and closure costs (LOM).

Readers are cautioned that the PEA is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty the results of the PEA will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional work is required to upgrade the mineral resources to mineral reserves. In addition, the mineral resource estimates could be materially affected by environmental, geotechnical, permitting, legal, title, taxation, socio-political, marketing, or other relevant factors.

The completed technical report on the PEA entitled "Falchani Lithium Project NI 43-101 Technical Report – Preliminary Economic Assessment" prepared by John Joseph Riordan, David Thompson, Valentine Cotzee of DRA Pacific and Mr. Stewart Nupen of The Mineral Corporation, effective February 4, 2020, can be located under Plateau's profile on SEDAR (www.sedar.com) and on the Company's website.

Key Project Attributes

- **Scaled approach** to development aimed at allowing the project to grow with market demand
- **Battery quality, low impurity lithium chemical** to enable complete onsite production, maximizing the Company's share of the value chain
- Lithium-rich sulfate process step to support **flexibility to adapt** lithium chemical production for industry demand
- Onsite acid plant to provide **green power generation** and enable **low cost reagent access**
- Inputs sourced largely in Peru to **support local development** while reducing costs and value-added taxes
- Availability of contract mining to **reduce CAPEX and provides flexibility** during expansion phases
- Major **contributor** to economic development in Peru of approximately $2.1 billion LOM capital investment and tax and royalty contributions estimated in excess of $5 billion[1]
- **Excellent infrastructure** near site to support future Project development and operations

[1] Royalties: approximately $760 million, Workers Participation Tax & Pension Fund: approximately $1.25 billion, Income Tax: approximately $3.75 billion.

Green Project Initiatives

- **Water Efficiency:** Use of filtered tailings to enable recycling of up to 90% of process water
- **Environmental and Personnel Safety:** Use of environmentally responsible dry stacking tailings technology
- **Clean Energy Generation:** Sulfuric acid plant on site to produce sufficient clean energy to power entire process plant and provide excess power
- **Renewable Energy:** Access to hydro power grid available nearby
- Future development work to evaluate **opportunities** such as:
    - electric mine fleet with excess clean energy storage on site
    - rainwater run off storage and additional water recycling
    - low CO_2 transport and logistics for consumables

Processing

The process flow sheet (below), including plant, equipment and up-front leaching and downstream precipitation was developed by DRA, working with ANSTO Minerals' ("ANSTO") laboratories with input from M.Plan International ("M.Plan"). Following mining, mineralized material will be crushed to P80 150 μm, followed by warm (95 °C) sulfuric acid (H_2SO_4) tank leach processing for a residence time of 24 hours, to extract 89% of lithium to leach solution. The process utilizes conventional up-front tank leaching, widely used in various mining operations to extract metals from mineralized material today. This is followed by a 3-stage purification process to reduce various impurities in the leach solution, mechanical evaporation and conventional precipitation, using a crystallization plant, to produce a high purity/low impurity battery grade Li_2CO_3 product as demonstrated by test work run by ANSTO and described in the press release dated July

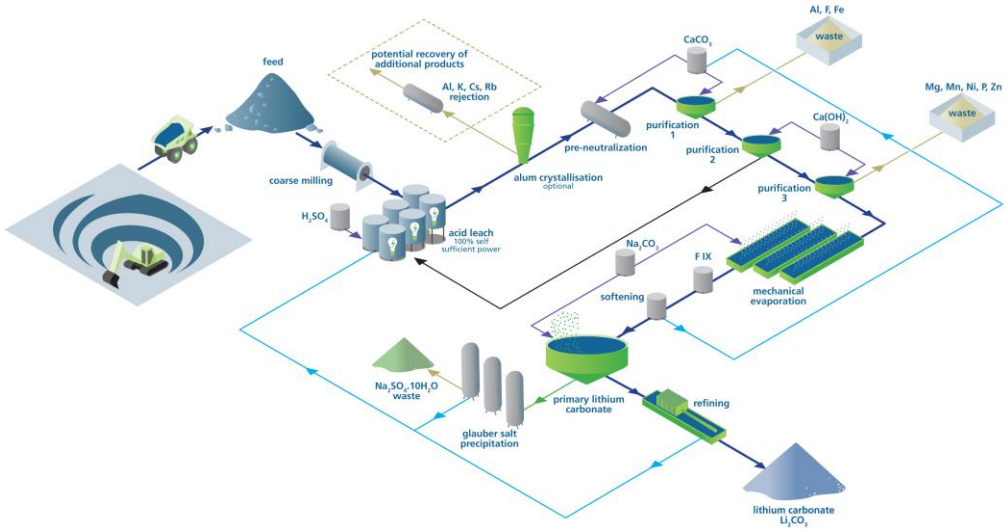
18, 2019. The estimated time from mining to producing a battery grade end-product is approximately 48 hours. An overall recovery of 80% from mineralized material to Li_2CO_3 is utilized in the PEA.

As a significant portion of the operating costs are derived from sulfuric acid use as the leaching reagent, the PEA includes the construction of a 1,700 tonnes per day ("tpd") sulfur burning acid plant at site, in P1, to produce, on average, 1,500 tpd of sulfuric acid. In subsequent phases, additional modules are added to meet expanded processing capacity.

Metallurgical Work Program Results:

	Tank Leach
High Purity, Battery Grade (>99.50%)	99.74%
Overall Recoveries Li2CO3	77 to 81%
Sulfuric Acid Addition	370 kg/t

Tank Leach Process Flowsheet



On April 8, 2020, results from the preliminary test work program ("Program") focused on recovery and precipitation of sulfate of potash, rubidium and caesium concentrate from a pregnant leach solution ("PLS") created from the Falchani Project PEA.

Highlights of the Program:

- The Program was run on a sample of Falchani lithium-rich tuff material at the same conditions as the lithium leaching studies published by the Company in the PEA with concentrations of 3,400 ppm lithium; 3 wt% K; 600 ppm Cs and 1,400 ppm Rb;
- Extractions of the following metals (from lithium-rich tuff into sulfate solution via previous test work and supported in this Program):
    - Potassium ("K"): 43%
    - Caesium ("Cs"): 84%
    - Rubidium ("Rb"): 67%
- Excellent rejection of aluminum using 'simple' neutralization with lime or high temperature treatment (calcination);
- Caesium precipitation: selective crystallization of >99% of the Cs and Rb from PLS, along with some K, by cooling to between 20 and 30°C following the PEA flowsheet (above); and
- Precipitation of approximately 18% of K from leaching of feed material through to PLS at temperatures below 20°C to a purified K-alum in the first pass, with future test work potentially optimizing the yield.

Extraction and Precipitation in Current Program

		Precipitation %	
Element	**Extraction in Leach %**	**At 25°C**	**At 5°C**
K	**43**	**61**	**87**
Rb	**67**	**100**	**100**
Cs	**84**	**100**	**100**

Future Optimization Potential

The PEA identifies several opportunities which may greatly enhance the economics and include:

- **Revenue opportunities:** further evaluation of additional revenue streams, not included in the PEA, such as SOP fertilizer (K_2SO_4), caesium sulfate (Cs_2SO_4) and rubidium sulfate (Rb_2SO_4). Preliminary metallurgical test work completed in April 2020 (refer to results above).
- **Capital optimization:** alternative acid plant and processing plant/equipment sourcing, including evaluating options for "over the fence" acid and power purchase from a third-party operator.
- **Operating cost optimization:** long-term contracts for major consumables, reduction in processing consumables and/or costs through process model optimization.

Mineral Resource Estimates

The PEA has considered only the lithium-rich bearing tuffs ("LRT"), namely LRT1, LRT2, and LRT3, three of five geological units presented in the Falchani Lithium Project technical report, effective March 1, 2019, prepared in accordance with NI 43-101 by Mr. Stewart Nupen ("QP") of The Mineral Corporation and filed on SEDAR (the "2019 Technical Report"). As a result, the Base Case and Alternative Case utilize less than 48% and 47%, respectively, of the total mineral resource estimates included in the 2019 Technical Report.

The PEA Base Case considered the Mineral Resource estimate for both the Falchani and Ocacasa 4 concessions, as described in the 2019 Technical Report. As there have been changes to the mineral tenure circumstances, particularly with respect to the dispute over the ownership of the Ocacasa 4 concession, the split between Falchani and Ocacasa 4 is provided in the table below for additional clarity. The Alternative Case considered a sub-set of the Mineral Resource estimate described in the 2019 Technical Report, which being the Mineral Resources contained within the Falchani concession only. The Mineral Resource estimates have not been updated to inform the PEA, however, owing to the current mineral tenure dispute, for the Alternative Case, only the Falchani Concession Mineral Resource estimate has been considered. Please refer to the Cautionary Note Regarding Concessions section in this MD&A.

The mineral resource estimates for the Falchani Lithium Project, effective March 1, 2019, are based on a 1,000 ppm lithium ("Li") cut-off grade are as follows:

Licence	Category	Zone	Metric Tonnes (Mt)	Li (ppm)	Li_2O (%)	Li_2CO_3 (%)	Contained Li_2CO_3 (Mt)
FALCHANI	Indicated	UBX	5.38	1 472	0.32	0.78	0.04
		LRT1	6.15	3 718	0.80	1.98	0.12
		LRT2	16.66	3 321	0.72	1.77	0.29
		LRT3	11.03	3 696	0.80	1.97	0.22
		LBX	10.16	1 901	0.41	1.01	0.10
		Total	**49.39**	**2 961**	0.64	1.58	0.78
	Inferred	UBX	8.44	1 616	0.35	0.86	0.07
		LRT1	13.84	3 290	0.71	1.75	0.24
		LRT2	28.68	2 994	0.64	1.59	0.46
		LRT3	16.13	3 292	0.71	1.75	0.28

Licence	Category	Zone	Metric Tonnes (Mt)	Li (ppm)	Li_2O (%)	Li_2CO_3 (%)	Contained Li_2CO_3 (Mt)
		LBX	57.39	2 250	0.48	1.20	0.69
		Total	**124.48**	**2 629**	0.57	1.40	1.74
OCACASA 4	Indicated	UBX	0.85	1 750	0.38	0.93	0.01
		LRT1	1.32	3 668	0.79	1.95	0.03
		LRT2	5.37	3 232	0.70	1.72	0.09
		LRT3	2.00	3 658	0.79	1.95	0.04
		LBX	2.00	1 379	0.30	0.73	0.01
		Total	**11.53**	**2 926**	0.63	1.56	0.18
	Inferred	UBX	5.33	1 911	0.41	1.02	0.05
		LRT1	10.17	3 422	0.74	1.82	0.19
		LRT2	33.62	3 292	0.71	1.75	0.59
		LRT3	21.11	3 349	0.72	1.78	0.38
		LBX	65.36	2 297	0.49	1.22	0.80
		Total	**135.59**	**2 777**	0.60	1.48	2.00

UBX = upper breccia; LRT = lithium rich tuff; LBX = lower breccia
Notes: Minor discrepancies due to rounding may occur. Li Conversion Factors as follows: Li:Li_2O=2.153; Li:Li_2CO_3=5.323; Li_2O:Li_2CO_3=2.473. Geological losses of 5% or 10% have been applied, based on geological structure and data density. The average geological loss is 6%. Density = 2.40.

The mineral resource estimates are based on the initial 29 drill holes and 20 additional drill holes. Sampling was carried out at sampling intervals of between 0.5m and 1.0m. Samples used throughout the estimation process were composited to a downhole length of 2.5m.

Environmental
A baseline environmental study (the "Baseline Study") undertaken by ACOMISA, a Lima-based environmental consulting company and continued in collaboration with Anddes Asociados S.A.C. ('Anddes') is ongoing. The Baseline Study was expanded to include each of the Falchani Lithium Project and Macusani Uranium Project areas and now covers the affected areas belonging to the communities of Isivilla, Tantamaco, Corani, Chimboya and Paquaje, and Chacaconiza. This expanded Baseline Study was accepted by the Peruvian Government Agency SENACE (Servicio Nacional de Certificacion Ambiental) and built on previous environmental monitoring that was started by the Company in 2010 during the exploration phase of work. The Baseline Study has recently progressed into an EIA that includes community relations and impacts of future development, as well as flora, fauna, water, air and noise sampling and comprehensive archaeological studies. Restrictions put in place to mitigate COVID-19 in Peru may cause delays to the completion of the EIA as work had been put on hold during lockdown. However, some EIA activities continued in 2020, albeit at a slower pace.

The Falchani Lithium Project lies outside of the Corani-Macusani Area of Cultural and Archaeological Significance ("Archaeological Area of Interest"). Archaeological studies completed as part of our exploration program permitting and recent EIA study work have shown that to date, there are no sites of cultural or archaeological significance affecting the Falchani Lithium Project. The local landscape, landforms, higher elevation and rock weathering style at the project was not conducive for hosting, or preservation of, sites of archaeological significance. An overview of the results of the archaeological studies, including excavations available to date, is being prepared for presentation to the Ministry of Culture of Peru.

Macusani Uranium Project Highlights

The Macusani Uranium Project is one of the largest undeveloped uranium projects in the world containing significant measured, indicated and inferred uranium resources. Located approximately 25 kilometres away from the Company's Falchani Lithium Project, the Macusani Uranium Project is proximal to excellent infrastructure and has a significant unexplored land package.

Preliminary Economic Assessment
The Company completed and filed on SEDAR on February 10, 2016, an updated PEA based on the combined resource estimate. The PEA was completed by UK based, mining engineering consultants Wardell Armstrong International and GBM Minerals Engineering Consultants Limited and contains a detailed base case which contemplates the construction of a conventional open pit mining operation with a centralized processing facility.

An injunction restoring concession title, rights and validity has been granted by judicial resolution for the concessions incorporated in the mine plan for the Macusani Uranium Project PEA, and the rights have been restored to the Company. Please refer to the Cautionary Note Regarding Concessions section in this MD&A. Six concessions total contain mineral resources, of which two are not included in the Macusani Uranium Project PEA, which is filed under Plateau'sprofile on SEDAR at www.sedar.com.

Unless otherwise stated, all dollar figures for the PEA are in United States dollars and the economic highlights represent Plateau's 100% interest in the Macusani Uranium Project.

Key Highlights of the Macusani Uranium Project PEA:

- Cash Operating Costs[1]: **$17.28/lb U_3O_8** average life of mine ("LOM")
- Initial Capital Expenditures: $249.7 M plus $50.1 M contingencies
- Total Sustaining Capital Costs[1]: $43.9 M
- Net Present Value$_{(8\%)}$: ($50/lb U_3O_8 selling price): $852.7 M pre-tax / **$603.1 M after-tax**
- Internal Rate of Return: ($50/lb U_3O_8): 47.6% pre-tax / **40.6% after-tax**
- Payback Period: ($50/lb U_3O_8): 1.69 years pre-tax / **1.76 years after-tax**
- Production Profile: **6.09 Mlbs/yr** average LOM
- Operating Profile: near surface open pit mining of five deposits along with a small high-grade underground mine operation, heap leach process plant
- Mining Rate: 109.0 Mt/yr at 289 ppm U_3O_8 for 10 years at an average strip ratio of 2:1 (waste:mineralized material)
- Processing Throughput: 10.9 M tonne per annum
- High-grade scenarios were also considered with both heap leach and tank leach processing options and the Company continues to evaluate optimization scenarios

[1] Financial metrics which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. See Alternative Performance Measurements section in this MD&A for additional information.

Processing work tailored towards upgrading, or pre-concentrating, through communition/concentration studies on the uranium mineralization was planned for early 2020. The test work programs were deferred to the end of the year. The research and development work was restarted in August 2020 with encouraging results released March 30, 2021. The work utilized mineralization from 3 main deposits, with the following results: **Colibri II-III Deposit** – 81.6% of U retained in 35.3% of original mass passing 300 µm; Calculated Head Grade of 270 ppm U upgraded to 623 ppm U (Upgrade factor 2.3) using double scrubbing for 12 minutes each cycle; **Corachapi Deposit** – 73% of U retained in 31% of original mass passing 212 µm; Calculated Head Grade of 245 ppm U upgraded to 570 ppm U (Upgrade factor 2.3) using initial scrubbing for 15 minutes at 60% solids (by mass) followed by secondary scrubbing for 5 minutes at 45% solids. The upgrading results highlight the opportunity to bring in lower grade deposits previously not included in the PEA production schedule, and the higher grade feed material should positively impact the PEA Capital Costs with a smaller plant footprint and PEA Operating Costs due to lower energy and reagent costs. Trade off studies

between original heap leach processing and tank/vat leach processing options will be conducted using the upgraded fraction achievable in a scrubbing and classification circuit.

Significant work programs going forward are dependent on COVID-19, the pending framework for uranium transport and export in coordination with the International Atomic Energy Agency and the Peruvian Institute of Nuclear Energy (the "New Uranium Regulations") in country.

Readers are cautioned that the PEA is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty the results of the PEA will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional work is required to upgrade the mineral resources to mineral reserves. In addition, the mineral resource estimates could be materially affected by environmental, geotechnical, permitting, legal, title, taxation, socio-political, marketing or other relevant factors.

Environmental
The Company has initiated components of an EIA covering the project building on the Environmental Baseline Study.

Within the Macusani Uranium Project area lies an Archaeological Area of Interest which includes sites of cultural interest. The area boundaries are very clearly defined and are well-known to people working in the region. The Company continues working with highly respected and experienced environmental and archaeological professionals, local communities and Peruvian authorities to develop a plan to protect any sites located in proximity to the proposed future project operations. The Macusani Uranium Project and proposed future infrastructure for operations currently does not directly affect any such sites.

With the assistance of the Ministry of Culture of Peru, the Company has spent the past three years conducting a professional archaeological study in the project area. This is a full archaeological research project that the Company's team initiated and is still on-going. Whilst initial completion of field work was targeted for H1 2020, followed by presentation of the archaeological study to the Ministry of Culture in 2020, timing will now be subject to easing of the Peru government's COVID-19 lockdown restrictions, which have impacted access to the site. However, desktop work is still ongoing and when it is safe to resume work on-site, the Company expects the work to be completed within a few months.

The Company remains fully informed of the progress of this archeological study and is confident based on the findings to date, that together with the qualified investigating team, will work towards an outcome that respects, salvages and preserves cultural heritage where it exists. In addition, all of the recently validated artefacts are currently exposed to natural erosion and decay from the weather conditions that characterize the Macusani plateau, therefore a logical, preserving solution should be found. It is positive to see the government pro-actively working towards an actionable outcome on both accounts, and it is indicative of the level of support across the board for the Company's projects.

The Company, and its predecessor companies, have been exploring continuously in the Macusani area since the initial land acquisition in 2005. All exploration activities are completed under fully approved social, community agreements and exploration/mining permits.

Peru Exploration
Exploration activities during the period were limited by restrictions due to COVID-19 with the only recent activity being collection of uranium outcrop samples from the Macusani Uranium Project for the pre-concentration test work. Five areas spread between various drilled targets with reported uranium resources were covered by radiometric mapping and surface sampling. The results of this surface exploration activity were released on January 25, 2021. Exploration work including trenching and sampling started in the Quelcaya village area where new occurrences of Li-rich rocks were initially reported in 2019. The recent prospecting and mapping activities demonstrate that the new lithium occurrences in the vicinity of the Quelcaya village are more extensive than initially modelled. These results were released May 20, 2021.

Exploration work is currently being planned and permitted to support the following:

- Extension/in-fill drilling at the Falchani lithium deposit
- Initial exploration drill testing of the two new lithium target areas at Quelcaya
- Drilling to expand/extend several of the uranium deposit following up the positive sampling and radiometric prospecting results on the Macusani Uranium Project.

Outlook

The Company continues to believe that the growing demand for lithium ion batteries will continue to drive demand for lithium products and that the domestic market for lithium products will be under supplied for many years to come. The uranium market is equally compelling with persistent supply/demand imbalance, improving price environment and continuing steady demand growth. These situations position the Company well should the Company be able to raise the required capital to continue its exploration and development efforts with the goal of successfully developing commercially viable lithium and uranium deposits.

Abandoned Properties

Extinction Ridge Property - Nevada, USA

In November 2018, the Company finalized a purchase/royalty agreement with Nevada Alaska Mining Co., Inc. ("Extinction Ridge Royalty Holder"), who has the claims and title to a series of unpatented lode mining claims located in Eureka County, Nevada, USA (the "Extinction Ridge Property"), subject to an overriding 2% gross royalty, of which 1% can be purchased within 6 years for $1 million. Under the agreement, the terms of the purchase are outlined below:

As at February 4, 2019, the Company fulfilled its commitments and acquired an 100% undivided interest in the Extinction Ridge Property.

During the year ended February 28, 2021, the Company elected not to continue exploration on the Extinction Ridge Property and wrote-off the related costs it had incurred.

Summary of Quarterly Results

The following table sets out selected quarterly financial information for each of the eight recently completed quarters. The financial information has been reported in accordance with IFRS and is presented in Canadian dollars, unless otherwise indicated.

	Feb 28, 2021	Nov 30, 2020	Aug 31, 2020	May 31, 2020
	$	$	$	$
Total assets	17,189,542	17,851,841	17,215,884	1,700,605
Total liabilities	1,552,695	1,990,590	630,359	679,516
Working capital	4,812,870	4,751,382	6,187,254	330,610
Revenues	-	-	-	-
Net loss	(2,382,777)	(6,142,042)	(3,580,498)	(856,158)
Loss per share	(0.02)	(0.05)	(0.03)	(0.01)

	Feb 29, 2020	Nov 30, 2019	Aug 31, 2019	May 31, 2019
	$	$	$	$
Total assets	1,657,029	962,366	5,710,832	10,076,431
Total liabilities	651,315	489,836	438,249	330,387

Working capital (deficit)	317,153	(210,975)	(291,263)	49,092
Revenues	-	-	-	-
Net loss	(1,616,025)	(5,270,988)	(4,863,461)	(718,658)
Loss per share	(0.02)	(0.08)	(0.08)	(0.01)

The Company has not yet earned revenue from any of its mineral properties. If a property is determined to have limited exploration potential the property is abandoned and expenditures are written off to operations.

Variances quarter over quarter can be explained as follows:

- For the quarter ended February 28, 2021, the higher net losses are related to significant marketing expenses of $2,103,464, exploration and evaluation costs of $533,002, and a write-off of exploration and evaluation assets of $251,133 for the Extinction Ridge Property.
- For the quarter ended November 30, 2020, the higher net losses are related to significant marketing expenses of $522,930, share-based compensations of $4,732,320, and exploration and evaluation costs of $555,653.
- For the quarter ended August 31, 2020, the higher net losses are related to significant marketing expenses of $3,108,620 and exploration and evaluation costs of $192,853.
- For the quarter ended November 30, 2019, the higher net losses are related to a write-off of exploration and evaluation assets of $4,880,309 for the Colorado property.
- For the quarter ended August 31, 2019, the higher net losses are related to a write-off of exploration and evaluation assets of $4,191,357 for the Gap Lode Claim Block property.

Selected Annual Information

The following financial information is derived from the Company's annual audited financial statements for the years ended February 28, 2021, February 29, 2020, and February 28, 2019, has been prepared in accordance with IFRS and is presented in Canadian dollars, unless otherwise indicated:

	For the year ended		
	February 28, 2021	**February 29, 2020**	**February 28, 2019**
	$	**$**	**$**
Revenues	-	-	-
General and administrative expenses	(12,710,342)	(3,397,466)	(7,907,312)
Loss and comprehensive loss	(12,961,475)	(12,469,132)	(16,816,018)
Basic and diluted loss per common share	(0.12)	(0.19)	(0.33)
Working capital	4,812,870	317,153	631,833
Total assets	17,189,542	1,657,029	11,015,800
Total liabilities	1,552,695	651,315	719,848

As at February 28, 2021, the Company had not yet achieved profitable operations and has accumulated losses of $57,779,620 (February 29, 2020 - $44,818,145) since inception. The basic and diluted loss per share for the year ended February 28, 2021 and February 29, 2020 was $0.12 and $0.19, respectively.

The Company's future financial success will be dependent upon the ability to obtain necessary financing to complete the development of reserves or the discovery and development of a body of commercial ore. Such discovery and development may take years, if at all, to complete and the amount of resulting income, if any, is impossible to determine.

Results of Operations

The following table sets forth selected financial information regarding the Company's operating and administrative expenses for the years ended February 28, 2021 and February 29, 2020:

	For the years ended	
Expenses	**February 28, 2021**	**February 29, 2020**
	$	**$**
Consulting fees	213,104	81,715
Depreciation	1,131	-
Exploration and evaluation expenditures	1,441,414	1,146,703
Filing and listing fees	72,852	19,147
Foreign exchange loss	17,731	25,951
General and administrative	180,164	64,360
Insurance	20,547	13,175
Management fees	443,831	355,681
Marketing	6,185,302	864,371
Professional fees	266,527	91,686
Property investigation costs	-	7,500
Registrar and transfer agent fees	51,644	25,477
Rent	52,000	38,110
Share-based compensation	3,715,490	563,420
Travel	48,605	100,170
	12,710,342	3,397,466

The table below details the significant changes in administrative expenditures for the year ended February 28, 2021 as compared to corresponding year ended February 29, 2020:

Expenses	**Increase / Decrease in Expenses**	**Explanation for Change**
Consulting fees	Increase of $131,389	Increased due to engaging more consultants for strategic and corporate advisory services.
Exploration and evaluation expenditures	Increase of $294,711	Increased due to increase in exploration activities during the year.
Management fees	Increase of $88,150	Increased due to additional fees being paid to directors for business development and management services.
Professional fees	Increase of $174,841	Increased due to incurring significant legal fees in relation to the acquisition of Plateau.
Share-based compensation	Increase of $3,152,070	Increased due to more options with higher estimated value being granted in the current year.

In relation to the increase of $5,320,931 of the Company's marketing expenses for year ended February 28, 2021, in addition to its more traditional marketing and investor relations initiatives, the Company also implemented a strategy focused on raising market and investor awareness primarily in the United States but also Europe. With the location of one of the Company's principal assets in Nevada and the renewed focus on the domestic supply of critical minerals, including lithium, in the US, the appetite and interest levels in the sector were generally very strong especially with the discovery of the large lithium resource at the TLC Property. In addition, it made sense to support the Company's OTCQB listing and create liquidity in American Lithium stock on that market.

With specific timing largely based on prevailing market conditions, the Company launched several marketing campaigns throughout the period, primarily utilizing Promethean Marketing Inc., a specialist in corporate marketing and investor awareness campaigns, for the US Markets and also Clarkham Capital Ltd. for some European marketing. Both companies are specialists in their fields and the Company has had a successful history of working with them. These campaigns utilized a variety of different media, including digital and online, print and hard copy, including specific mail out campaigns, articles in publications etc. and interviews with specialist news-letter writers and other journalists.

During the year these marketing initiatives were successful with the Company's shareholder base growing to over 42,000 shareholders in the US alone, strong daily trading liquidity in the Company's shares, including on the OTCQB, and a significant increase in the Company's stock price over the year. All key elements in positioning the Company to utilize its stock as currency to make accretive acquisitions and raise the large amounts of capital required to continue to develop its projects and grow the Company.

Fourth Quarter

The table below details the significant changes in administrative expenditures for the three months ended February 28, 2021 as compared to corresponding period ended February 29, 2020:

Expenses	Increase / Decrease in Expenses	Explanation for Change
Exploration and evaluation	Increase of $304,259	Increased due to increase in exploration activities during the year.
Marketing	Increase of $1,488,392	Increased due to new marketing and social media campaigns engaged to increase investor awareness and increase in the marketing budget.
Professional fees	Increase of $131,033	Increased due to incurring significant legal fees in relation to the acquisition of Plateau.

During the fourth quarter ended February 28, 2021, the Company recorded a net loss of $2,382,777 or $0.02 per share compared with net loss of $6,496,334 or $0.09 per share in the fourth quarter of 2020. The Company's cash balance increased by $19,662 during the fourth quarter of fiscal 2021 due to issuing shares for options exercised with proceed of $919,100 and warrants exercised with proceed of $2,256,103, which was partially offset by funding operating expenses, repayment of note payable, share issuance costs, and incurring exploration and evaluation expenditures.

Liquidity and Capital Resources

The Company's liquidity and capital resources at the following dates are as follows:

	February 28, 2021	February 29, 2020
	$	$
Cash	5,506,326	804,628
Term deposit	25,023	25,061
Amounts receivable	15,824	12,953
Prepaid expenses and deposits	37,382	125,826
Accounts payables and accrued liabilities	(413,426)	(376,712)
Notes payable	-	(35,000)
Due to related parties	-	(239,603)
Current portion of long-term debt	(358,259)	-
Working capital	4,812,870	317,153

The Company has no revenue generating operations from which it can internally generate funds and therefore has been incurring losses since inception. The Company has financed its operations and met its capital requirements primarily through the sale of capital stock by way of private placements and the subsequent exercise of share purchase warrants issued in connection with such private placements and the exercise of stock options. When acquiring interests in resource properties through purchase or option, the Company issues common shares or a combination of cash and shares to the vendors of the property as consideration for the property in order to conserve its cash. The Company expects that it will continue to operate at a loss for the foreseeable future and will require additional financing to fund the development of its existing properties and the acquisition of potential resource properties.

As at February 28, 2021, the Company had working capital of $4,812,870 (February 29, 2020 – $317,153). During the year ended February 28, 2021, the Company's cash position increased by $4,701,698, compared to a decrease of $235,849 during the year ended February 29, 2020. The increase in the current year was mainly due to proceeds from warrants exercised of $12,762,608 and stock options exercised of $1,712,600 which was partially offset by funding operating expenses and exploration and evaluation asset expenditures. The decrease in the prior year was mainly due to funding operating expenses which was partially offset by proceeds from closing of a private placement for $1,885,103, note payable of $35,000, and warrants exercised of $753,333. In April 2021, the Company's cash position was further enhanced by the proceeds of a non-brokered private placement which raised $15 million.

Off-Balance Sheet Arrangements

The Company has not entered into any off-balance sheet arrangements.

Risk Factors

The Company is in the business of acquiring, exploring and, if warranted, developing and exploiting natural resource properties. Due to the nature of the Company's business and the present stage of exploration of its resource properties (which are primarily early stage exploration properties with no known resources or reserves that have not been explored by modern methods), the following risk factors will apply:

COVID-19 Pandemic: In March 2020, the World Health Organization declared coronavirus COVID-19 a global pandemic. This contagious disease outbreak, which has continued to spread, and any related adverse public health developments, has adversely affected workforces, customers, economies, and financial markets globally, potentially leading to an economic downturn. It has also disrupted the normal operations of many businesses, including the Company's. This outbreak could decrease spending, adversely affect and harm our business and results of operations. It is not possible for the Company to predict the duration or magnitude of the adverse results of the outbreak and its effects on the Company's business or results of operations at this time.

Resource Exploration and Development is Generally a Speculative Business: Resource exploration and development is a speculative business and involves a high degree of risk, including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in size or too metallurgically challenging to return a profit from production. The marketability of natural resources that may be acquired or discovered by the Company will be affected by numerous factors beyond the control of the Company. These factors include market fluctuations, the proximity and capacity of natural resource markets, government regulations, including regulations relating to prices, taxes, royalties, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital. The great majority of exploration projects do not result in the discovery of commercially mineable deposits of ore.

Title to Property: The acquisition of title to resource properties is a detailed and time-consuming process. The Company may acquire an interest in its properties through land use permits. Title to, and the area of, the properties may be disputed. There is no guarantee that such title will not be challenged or impaired. There may be challenges to the title of the property in which the Company may have an interest, including concessions which, if successful, could result in the loss or reduction of the Company's interest in the property, including the Peru concessions. As noted under the *Cautionary Note Regarding Concessions* in this MD&A, thirty-two of the 151 concessions held by American Lithium's subsidiary Macusani, are currently subject to the Processes in Peru to overturn resolutions issued by INGEMMET and the Mining Council of MINEM in February 2019 and July 2019, respectively, which declared Macusani's title to the 32 of the concessions invalid due to late receipt of the annual validity payment. Macusani successfully applied for injunctive relief on 32 concessions in a Court in Lima, Peru, and the grant of the Precautionary Measures (Medida Cautelar) has restored the title, rights and validity of those 32 concessions to Macusani until a final decision is obtained in at the last stage of the judicial process. If American Lithium's subsidiary Macusani does not obtain a successful resolution of Processes, Macusani's title to the concessions could be revoked.

Foreign operations. The Company is exposed to risks of political instability and changes in government policies, laws and regulations in Peru. The Company holds mineral interests in the Republic of Peru that may be adversely affected in varying degrees by political instability, government regulations relating to the mining industry and foreign investment therein, and the policies of other nations in respect of Peru. Any changes in regulations (including, without limitation, the New Uranium Regulations) or shifts in political conditions are beyond the Company's control and may adversely affect the Company's business. New laws, regulations and requirements may be retroactive in their effect and implementation. The Company's operations may be affected in varying degrees by government regulations, including those with respect to restrictions on production, price controls, export controls, income taxes, expropriation of property, employment, land use, water use, environmental legislation and mine safety. The Company's operations may also be adversely affected in varying degrees by government regulations, including those with respect to restrictions on foreign ownership, state-ownership of strategic resources, production, price controls, export controls, income taxes, expropriation of property, employment, land use, water use, environmental legislation and mine safety. There is no assurance that permits can be obtained, or that delays will not occur in obtaining all necessary permits or renewals of such permits for existing properties or additional permits required in connection with future exploration and development programs. In the event of a dispute arising at the Company's foreign operations, the Company may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdiction of courts in Canada. The Company may also be hindered or prevented from enforcing its rights with respect to a government entity or instrumentality because of the doctrine of sovereign immunity. Government authorities in emerging market countries often have a high degree of discretion and at times may appear to act selectively or arbitrarily, and sometimes in a manner that may not be in full accordance with the rule of law or that may be influenced by political or commercial considerations. Unlawful, selective or arbitrary governmental actions could include denial or withdrawal of licenses, sudden and unexpected tax audits, and civil actions. Although unlawful, selective or arbitrary government action may be challenged in court, such action, if directed at the Company or its shareholders, could have a material adverse effect on the Company's business, results of operations, financial condition and future prospects.

Potential conflicts of interest: Certain of the Company's directors and officers may serve as directors and/or officers of other public and private companies and devote a portion of their time to manage other business interests. This may result in certain conflicts of interest, to the extent that such other companies may participate in ventures in which the Company is also participating. The laws of British Columbia require the directors and officers to act honestly, in good faith, and in the best interests of the Company. In addition, each director must declare his or her interest and abstain from voting on any contract or transaction in which the director may have a conflict of interest.

Mining Industry is Intensely Competitive: The Company's business will be the acquisition, exploration and development of resource properties. The mining industry is intensely competitive and the Company will compete with other companies that have far greater resources.

Permits and Licenses: The operations of the Company will require licenses and permits from various governmental authorities. There can be no assurance that the Company will be able to obtain all necessary licenses and permits that may be required to carry out exploration, development and mining operations at its projects.

Environmental Matters: Existing and possible future environmental legislation, regulations and actions could cause significant expense, capital expenditures, restrictions and delays in the activities of the Company, the extent of which cannot be predicted and which may well be beyond the capacity of the Company to fund. The Company's right to exploit any mining properties will be subject to various reporting requirements and to obtaining certain government approvals and there can be no assurance that such approvals, including environment approvals, will be obtained without inordinate delay or at all.

Fluctuation of Metal Prices: Even if commercial quantities of mineral deposits are discovered by the Company, there is no guarantee that a profitable market will exist for the sale of the metals produced. Factors beyond the control of the Company may affect the marketability of any substances discovered. The prices of various metals have experienced significant movement over short periods of time, and are affected by numerous factors beyond the control of the Company, including international economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods. The supply of and demand for metals are affected by various factors, including political events, economic conditions and production costs in major producing regions. There can be no assurance that the price of any mineral deposit will be such that any of its resource properties could be mined at a profit.

No Assurance of Profitability: The Company has no history of earnings and, due to the nature of its proposed business, there can be no assurance that the Company will ever be profitable. The Company has not paid dividends on its shares and does not anticipate doing so in the foreseeable future. The only present source of funds available to the Company is from the sale of its common shares or, possibly, the sale or optioning of a portion of its interest in its resource properties. Even if the results of exploration are encouraging, the Company may not have sufficient funds to conduct the further exploration that may be necessary to determine whether or not a commercially mineable deposit exists. While the Company may generate additional working capital through further equity offerings or through the sale or possible syndication of its properties, there can be no assurance that any such funds will be available on favourable terms, or at all. At present, it is impossible to determine what amounts of additional funds, if any, may be required. Failure to raise such additional capital could put the continued viability of the Company at risk.

Government Regulation: The Company's business interests and operations are subject to the laws and regulations of the jurisdictions in which the Company operates. These laws and regulations are wide-ranging and oversee social license, exploration, development, taxes, employee labour standards, health and safety, environmental protection, human rights, anticorruption measures and matters related to later stage operating companies including but not limited to production, exports, waste disposal and tailings management, safe handling of toxic substances, water usage and greenhouse gases. Compliance with such laws and regulations increases the costs of planning, designing, drilling, developing, constructing, operating, managing, closing, reclaiming and rehabilitating a mine or other facilities. Introduction of new laws, amendments to current laws and regulations governing mining activities and operations or more stringent implementation or arbitrary interpretation thereof could have a material adverse effect on the Company, increase costs, cause a reduction in levels of production and delay or prevent the development of the Company's projects. Regulatory enforcement, in the form of compliance or infraction notices, has occurred in the past and, while the current risks related to such enforcement are not expected to be material, the risk of material fines or corrective action cannot be ruled out in the future

Dependence Upon Others and Key Personnel: The success of the Company's operations will depend upon numerous factors, many of which are beyond the Company's control, including (i) the ability to design and carry out appropriate exploration programs on its resource properties; (ii) the ability to produce minerals from any resource deposits that may be located; (iii) the ability to attract and retain additional key personnel in exploration, marketing, mine development and finance; and (iv) the ability and the operating resources to develop and maintain the properties held by the Company. These and other factors will require the use of

outside suppliers as well as the talents and efforts of the Company and its consultants and employees. There can be no assurance of success with any or all of these factors on which the Company's operations will depend, or that the Company will be successful in finding and retaining the necessary employees, personnel and/or consultants in order to be able to successfully carry out such activities.

Financial Resources: The nature of the development of the Company's properties will depend upon the Company's ability to obtain financing through the joint venturing of projects, private placement financing, public financing or other means. There can be no assurance that the Company will be successful in obtaining the required financing. Failure to raise the required funds could result in the Company losing, or being required to dispose of, its interest in its properties. In particular, failure by the Company to raise the funding necessary to maintain in good standing its various option agreements could result in the loss of its rights to such properties.

Exploration and development activities are inherently risky: The business of exploration and extraction involves a high degree of risk. Few properties that are explored are ultimately developed into production. Unusual or unexpected formations, formation pressures, power outages, labour disruptions, explosions, cave-ins, landslides and the inability to obtain suitable or adequate machinery, equipment or labour are other risks involved in the conduct of exploration programs. These factors can all affect the timing, cost and success of exploration programs and any future development. Although the Company carries liability insurance with respect to its exploration operations, the Company may become subject to liability for damage to life and property, environmental damage, cave-ins or hazards against which it cannot insure or against which it may elect not to insure.

Previous operations may have caused environmental damage at certain of the Company's properties. It may be difficult or impossible to assess the extent to which such damage was caused by the Company or by the activities of previous operators, in which case, any indemnities and exemptions from liability may be ineffective, and the Company may be responsible for the costs of reclamation.

Estimates of mineral resources may prove to be inaccurate. Calculations of mineral resources, mineral reserves and metal recovery are estimates only, and there can be no assurance about the quantity and grade of minerals until reserves or resources are actually mined. Until reserves or resources are actually mined and processed, the quantity of reserves or resources and grades must be considered as estimates only. In addition, the quantity of reserves or resources may vary depending on commodity prices. Any material change in the quantity of resources, grade or stripping ratio or recovery rates may adversely affect the economic viability of the Projects and the Company's financial condition and prospects.

No known mineral reserves. Despite exploration work on the Company's mineral property interests, to date no mineral reserves have been established thereon. In addition, the Company is still engaged in exploration on all of its material properties in order to determine if any economic deposits exist thereon. The Company may expend substantial funds in exploring some of its properties only to abandon them and lose its entire expenditure on the properties if no commercial or economic quantities of minerals are found. Even if commercial quantities of minerals are discovered, the exploration properties might not be brought into a state of commercial production. Finding mineral deposits is dependent on a number of factors, including the technical skill of exploration personnel involved. The commercial viability of a mineral deposit once discovered is also dependent on a number of factors, some of which are the particular attributes of the deposit, such as content of the deposit including harmful substances, size, grade and proximity to infrastructure, as well as metal prices and the availability of power and water in sufficient supply to permit development. Most of these factors are beyond the control of the entity conducting such mineral exploration. The Company is an exploration and development stage company with no history of pre-tax profit and no income from its operations. There can be no assurance that the Company's operations will be profitable in the future. There is no certainty that the expenditures to be made by the Company in the exploration and development of its properties will result in discoveries of mineralized material in commercial quantities. Most exploration projects do not result in the discovery of commercially mineable deposits and no assurance can be given that any particular level of recovery of mineral reserves will in fact be realized or that any identified mineral deposit will ever qualify as a commercially mineable (or viable) mineral deposit which can be legally and economically exploited. There can be no assurance that minerals recovered in small scale tests will be

duplicated in large scale tests under on-site conditions or in production. If the Company is unsuccessful in its exploration and development efforts, it may be forced to acquire additional projects or cease operations.

Uninsured or Uninsurable Risks: The Company may become subject to liability for pollution or hazards against which it cannot insure or against which it may elect not to insure where premium costs are disproportionate to the Company's perception of the relevant risks. The payment of such insurance premiums and of such liabilities would reduce the funds available for exploration and production activities.

Financing Risks: The Company has no source of operating cash flow and has no assurance that additional funding will be available to it for further exploration and development of its projects. Although the Company has been successful in the past in obtaining financing through the sale of equity securities, there can be no assurance that it will be able to obtain adequate financing in the future or that the terms of such financing will be favourable. Failure to obtain such additional financing could result in delay or indefinite postponement of further exploration and development of its projects with the possible loss of such properties.

Surface Rights and Access: Although the Company acquires the rights to some or all of the minerals in the ground subject to the tenures that it acquires, or has a right to acquire, in most cases it does not thereby acquire any rights to, or ownership of, the surface to the areas covered by its mineral tenures. In such cases, applicable mining laws usually provide for rights of access to the surface for the purpose of carrying on mining activities, however, the enforcement of such rights can be costly and time consuming. In areas where there are no existing surface rights holders, this does not usually cause a problem, as there are no impediments to surface access. However, in areas where there are local populations or land owners, it is necessary, as a practical matter, to negotiate surface access. There can be no guarantee that, despite having the right at law to access the surface and carry on mining activities, the Company will be able to negotiate a satisfactory agreement with any such existing landowners/occupiers for such access, and therefore it may be unable to carry out mining activities. In addition, in circumstances where such access is denied, or no agreement can be reached, the Company may need to rely on the assistance of local officials or the courts in such jurisdictions. Certain of the Company's properties are located on land administered by the United States BLM, and access is permitted subject to the completion of certain filings, tax payments and other obligations as are customary for mineral exploration companies operating in the State of Nevada.

If any of the Company's properties move to a development stage, the Company would be subject to additional risks respecting any development and production activities.

Rights or claims of indigenous groups. The Company's properties may be located in areas presently or previously inhabited or used by indigenous peoples and may be affected by evolving regulations regarding the rights of indigenous peoples. The Company's operations are subject to national and international laws, codes, resolutions, conventions, guidelines and other similar rules respecting the rights of indigenous peoples, including the provisions of ILO Convention 169. ILO Convention 169 mandates, among other things, that governments consult with indigenous peoples who may be impacted by mining projects prior to granting rights, permits or approvals in respect of such projects. The Company's current or future operations are subject to a risk that one or more groups of indigenous people may oppose continued operation, further development, or new development on those projects or operations on which the Company holds an interest. Such opposition may be directed through legal or administrative proceedings or protests, roadblocks or other forms of public expression against the Company or the owner/operators' activities and may require the modification of, or preclude operation or development of projects, or may require the entering into of agreements with indigenous people.

Price Fluctuations and Share Price Volatility: In recent years, the securities markets in the United States and Canada have experienced a high level of price and volume volatility, and the market price of securities of many companies, particularly those considered development stage companies, have experienced wide fluctuations in price which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. There can be no assurance that continual and extreme fluctuations in price will not occur.

Litigation risk. In the ordinary course of the Company's business, it may become party to new litigation or other proceedings in local or international jurisdictions in respect of any aspect of its business, whether under criminal law, contract or otherwise. The causes of potential litigation cannot be known and may arise from, among other things, business activities, employment matters, including compensation issues, environmental, health and safety laws and regulations, tax matters, volatility in the Company's stock price, failure to comply with disclosure obligations or labour disruptions at its project sites. Regulatory and government agencies may initiate investigations relating to the enforcement of applicable laws or regulations and the Company may incur expenses in defending them and be subject to fines or penalties in case of any violation and could face damage to its reputation. The Company may attempt to resolve disputes involving foreign contractors/suppliers through arbitration in another county and such arbitration proceedings may be costly and protracted, which may have an adverse effect on the Company's financial condition. Litigation may be costly and time-consuming and can divert the attention of management and key personnel from the Company's operations and, if adjudged adversely to the Company, may have a material and adverse effect on the Company's cash flows, results of operations and financial condition. Effective May 6, 2021, Plateau announced that it and two of its former officers received a Notice of Hearing together with a Statement of Allegations from staff of the Ontario Securities Commission announcing the commencement of regulatory proceedings to consider whether Plateau and the two officers engaged in conduct that warrants an order against them. Plateau is of the view that it has complied with its disclosure obligations, and these proceedings remain ongoing.

Climate change risks. The Company acknowledges climate change as an international and community concern and it supports and endorses various initiatives for voluntary actions consistent with international initiatives on climate change. However, in addition to voluntary actions, governments are moving to introduce climate change legislation and treaties at the international, national, state/provincial and local levels. Where legislation already exists, regulation relating to emission levels and energy efficiency is becoming more stringent. Some of the costs associated with reducing emissions can be offset by increased energy efficiency and technological innovation. However, if the current regulatory trend continues, the Company expects that this could result in increased costs at its operations in the future.

Costs of land reclamation. It is difficult to determine the exact amounts which will be required to complete all land reclamation activities in connection with the properties in which the Company holds an interest. Reclamation bonds and other forms of financial assurance represent only a portion of the total amount of money that will be spent on reclamation activities over the life of a mine. Accordingly, it may be necessary to revise planned expenditures and operating plans in order to fund reclamation activities. Such costs may have a material adverse impact upon the financial condition and results of operations of the Company.

Corruption and bribery laws. The Company's operations are governed by, and involve interactions with, many levels of government in other countries. The Company is required to comply with anti-corruption and anti-bribery laws, including the Criminal Code, and the Corruption of Foreign Public Officials Act (Canada), as well as similar laws in the countries in which the Company conducts its business. In recent years, there has been a general increase in both the frequency of enforcement and the severity of penalties under such laws, resulting in greater scrutiny and punishment to companies convicted of violating anti-corruption and anti-bribery laws. Measures that the Company has adopted to mitigate these risks are not always effective in ensuring that the Company, its employees or third-party agents will comply strictly with such laws. Furthermore, a company may be found liable for violations by not only its employees, but also by its contractors and third-party agents. If the Company finds itself subject to an enforcement action or is found to be in violation of such laws, this may result in significant penalties, fines and/or sanctions imposed on the Company resulting in a material adverse effect on the Company's reputation and results of its operations.

Foreign currency risk: The Company and its subsidiaries incur significant purchases denominated in currencies other than the presentation currency, the Canadian dollar, and are subject to foreign currency risk on assets and liabilities denominated in currencies other than the Canadian dollar. Exploration expenditures are transacted in United States Dollars, Peruvian New Soles **and Australian Dollars,** and the Company is

exposed to risk of exchange rate fluctuation between the Canadian dollar and these currencies. The Company does not hedge the foreign currency balances.

Related Party Transactions

Key management personnel include those persons having authority and responsibility for planning, directing and controlling the activities of the Company as a whole. The Company has determined that key management personnel consist of executive and non-executive members of the Company's Board of Directors and corporate officers.

	For the years ended	
	February 28, 2021	February 29, 2020
	$	$
Management fees	443,831	355,681
Share-based compensation	1,393,308	128,050
	1,837,139	483,731

During the year ended February 28, 2021, the Company entered into the following transactions with key management personnel:

Related party	Nature of transaction
Michael Kobler ("Kobler")	Management fees for the services provided by Michael Kobler, Executive Chair and the Chief Executive Officer.
Andrew Bowering ("Bowering")	Management fees for the services provided by Andrew Bowering, Director.

(a) Paid or accrued management fees of $323,831 (February 29, 2020 – $235,681) to a company controlled by Kobler. As at February 28, 2021, notes payable includes a non-interest bearing demand loan of $nil (February 29, 2020 - $35,000) payable to Kobler. In addition, the Company owed $nil (February 29, 2020 - $100,717) to a company controlled by Kobler for unpaid management fees.

(b) Paid or accrued management fees of $120,000 (February 29, 2020 – $120,000) to a company controlled by Bowering. As at February 28, 2021, the Company owed $nil (February 29, 2020 – $138,885) to a company controlled by Bowering for unpaid fees.

Critical Accounting Estimates

In the application of the Company's accounting policies, management is required to make judgments, apart from those requiring estimates, in applying accounting policies. The most significant estimates and judgments applying to the Company's financial statements include:

- the determination of the element of costs recorded as exploration and evaluation assets and determination of reclamation obligations;
- recognition of deferred tax assets and liabilities;
- the determination that the Company will continue as a going concern for the next year; and
- assumptions used in valuing options and warrants in share-based compensation calculation.

The preparation of financial statements in accordance with IFRS requires the Company to make estimates and assumptions concerning the future. The Company's management reviews these estimates and underlying assumptions on an ongoing basis, based on experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Revisions to estimates are adjusted for prospectively in the period in which the estimates are revised.

Estimates and assumptions where there is significant risk of material adjustments to assets and liabilities in future accounting periods include the recoverability of the carrying value of exploration and evaluation assets, fair value measurements for financial instruments, the recoverability and measurement of deferred tax assets, provisions for restoration and environmental obligations and contingent liabilities.

Financial Instruments and Risk Management

Fair value of financial instruments

The Company's financial instruments consist of cash, term deposit, amounts receivable, accounts payable, due to related parties, and long-term debt. As at February 28, 2021, the Company classifies its cash and term deposit as fair value through profit and loss and its amounts receivable, accounts payable, due to related parties, and long-term debt at amortized cost. The fair values of these financial instruments approximate their carrying values because of their current nature**.**

The Company classifies the fair value of these financial instruments according to the following hierarchy based on the amount of observable inputs used to value the instrument:

Level 1 – Quoted prices are available in active markets for identical assets or liabilities as of the reporting date. Active markets are those in which transactions occur in sufficient frequency and volume to provide pricing information on an ongoing basis. Cash and term deposit is classified under Level 1.

Level 2 – Fair value measurements are those derived from inputs other than quoted prices that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (derived from prices). The Company does not have any financial instruments classified under Level 2.

Level 3 – Valuations in the level are those with inputs for the asset or liability that are not based on observable market data. Accounts payable and accrued liabilities are classified under Level 3.

The Company's financial instruments are exposed to the following risks:

Credit Risk
Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations. Financial instruments which are potentially subject to credit risk for the Company consist primarily of cash and term deposit. The carrying amount of financial assets represents the maximum credit exposure. The Company has gross credit exposure at February 28, 2021 relating to cash and term deposit of $5,531,349. The cash and term deposit is held at a Canadian chartered bank and the Company considers the credit risk to be minimal.

Liquidity Risk
Liquidity risk is the risk that the Company will not be able to meet its obligations as they come due. The Company's ability to continue as a going concern is dependent on management's ability to raise the required capital through future equity or debt issuances but there can be no assurance that such financing will be available on a timely basis under terms acceptable to the Company. The Company manages its liquidity risk by forecasting cash flows from operations and anticipating any investing and financing activities. As at February 28, 2021, the Company had a cash balance of $5,506,326 to settle current liabilities of $771,685, and raised a further $15 million in April 2021. Liquidity risk is assessed as low.

Foreign Exchange Risk
The Company is exposed to foreign currency risk on fluctuations related to cash, accounts payable, and loan payable that are denominated in a foreign currency. As at February 28, 2021, the Company had a net liability of US$904,008. A 10% fluctuation in the foreign exchange rate of the United States dollar against the Canadian dollar would affect the Company's cash and accounts payable and accrued liabilities by approximately $114,700. The Company does not hedge the foreign currency balances.

Interest Rate Risk
Interest rate risk is the risk the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. As at February 28, 2021, the long-term debt bears interest at a fixed 5% per annum and is payable over four years. The Company has cash balances and term deposits with interest based on the prime rate. The Company's current policy is to invest excess cash in investment-grade short-term deposit certificates issued by its banking institution. The Company periodically monitors the investments it makes and is satisfied with the credit ratings of its banks.

Commodity Price Risk
The Company's ability to raise capital to fund exploration or development activities is subject to risks associated with fluctuations in the market price of lithium. The Company closely monitors commodity prices to determine the appropriate course of actions to be taken.

During the year ended February 28, 2021, there were no transfers between level 1, level 2 and level 3 classified assets and liabilities.

Capital Management

The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the exploration of its mineral properties and to maintain a flexible capital structure for its projects for the benefit of its stakeholders, to maintain creditworthiness and to maximize returns for shareholders over the long term. The Company does not have any externally imposed capital requirements to which it is subject. As the Company is in the exploration stage, its principal source of funds is from the issuance of common shares. The Company includes the components of shareholders' equity in its management of capital.

The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares to raise cash and obtain bridging loans from related parties. The Company's investment policy is to invest its cash in investment instruments in financial institutions with terms to maturity selected with regards to the expected time of expenditures from continuing operations.

There were no changes in the Company's management of capital during the year ended February 28, 2021.

Outstanding Share Data

As at the date of this report:

a) Authorized: unlimited common shares without par value.

b) Issued and outstanding: 176,722,019 common shares.

c) Outstanding stock options:
Included in the table below are Plateau stock options exchanged for an option to acquire from the Company the number of common shares equal to the product of: (A) the number of Plateau shares subject to such Plateau stock option immediately prior to the arrangement, multiplied by (B) 0.29 of a common share for each Plateau share.

Number of options	Exercise price $	Expiry date
700,000	0.35	July 28, 2021
1,230,000	0.72	April 27, 2022
970,000	0.96	January 9, 2023
1,500,000	0.31	February 9, 2023
450,000	0.35	June 29, 2023
500,000	1.14	August 17, 2023
400,000	0.81	January 9, 2024
800,000	0.65	April 23, 2024
600,000	0.25	January 4, 2025
4,329,667	1.28	September 17, 2025
307,640	0.30	December 9, 2025
7,050,000	2.17	June 10, 2026
18,837,307		

d) Outstanding warrants:

Included in the table below are Plateau warrants exchanged for a warrant to acquire from the Company the number of common shares equal to the product of: (A) the number of Plateau shares subject to such Plateau warrants immediately prior to the arrangement, multiplied by (B) 0.29 of a common share for each Plateau share.

Number of warrants	Exercise price $	Expiry date
600,000	0.125	January 22, 2022
3,955,000	0.375	February 1, 2022
4,054,500	3.00	April 29, 2024
18,445,959	3.00	May 11, 2024
1,585,000	0.50	September 17, 2021
4,800,533	0.40	April 27, 2024
1,305,245	0.40	May 12, 2024
1,532,680	0.40	May 13, 2024
36,278,917
